

NEWS RELEASE:

ITT awarded \$9.7 million contract to produce "Netted Iridium" tactical radio handsets

DULLES, VA. – November 16, 2009 – ITT Corporation (NYSE:ITT) announced today that it is being awarded a \$9 million contract for the supply of 1,450 distributed tactical communication systems - radio only (DTCS-RO) handsets. The DTCS-RO handsets are satellite-based hand-held tactical radios that provide over-the-horizon, beyond line-of-sight command and control capabilities suitable for tactical operations. Work will be performed in ITT's NexGen facility in Dulles, Va., and is expected to be completed by March 2010. The contracting activity is the Naval Surface Warfare Center, Dahlgren Division, Dahlgren, Va.

"Keeping our soldiers connected with tactical comms-on-the-move capabilities is vital to their missions" said Mark Adams, Vice President, ITT Corporation. "We are proud to be providing this needed capability for our warfighters."

The ability to transmit information over the entire battlespace while moving has been a challenge on today's modern battlefield. The distributed tactical communications system (DTCS), also known as Netted Iridium, will allow commanders and other network users at all echelons to exchange information throughout the theater of operation regardless of terrain features. In being responsive to the warfighter, DTCS systems provide global coverage, rapid deployment, mobility on the battlefield and situational awareness.
